

Active Directory Deployment & IAM Implementation – Greenspring Solutions

This project is the deployment of a Windows Server Domain Controller (Active Directory) for a company called Greenspring Solutions, it includes domain setup, client configuration, OU design, group policies, and access control in an enterprise environment.

Company Structure

Greenspring Solutions is a small IT services firm with the following structure:

- 1 x Windows Server (AD Domain Controller)
- 1 x Windows 8 Client PC
- 1 x Windows 8 Client PC

Project Objectives

- Configure an AD Domain Controller on Windows Server
- Join client PCs to the domain
- Create Organizational Units (OUs)
- Implement basic Group Policies for access control
- Simulate a centralized IT environment

Network Design

Internet

↓

Router (Gateway: 10.0.2.1)

↓

Switch

Device	IP Address	Role	
-----	-----	-----	
Windows Server	10.0.2.15	AD Domain Controller (DC)	
Windows 8 PC	DHCP	Client (CSU)	
Windows XP PC	DHCP	IT Client	

Domain Configuration

Domain Name: greenspring.org

Server Name: Windowsserver2022

Static IP: 10.0.2.15

AD Roles Installed: AD DS, DNS (DHCP)

Organizational Units (OUs)

Created using **Active Directory Users and Computers:**

Greenspring.org

├— OU: IT Department

| └— Users: Bidemi.IT

├— OU: CSU

| └— Users: charles.CSU

Group Policy (GPO)

Created and linked using **Group Policy Management Console (gpmc.msc)**:

GPO Name: Disable Shutdown Ability

Linked to: OU: IT Department

Policy Configured

Computer Configuration > Administrative Templates > System > Disable Shutdown Ability

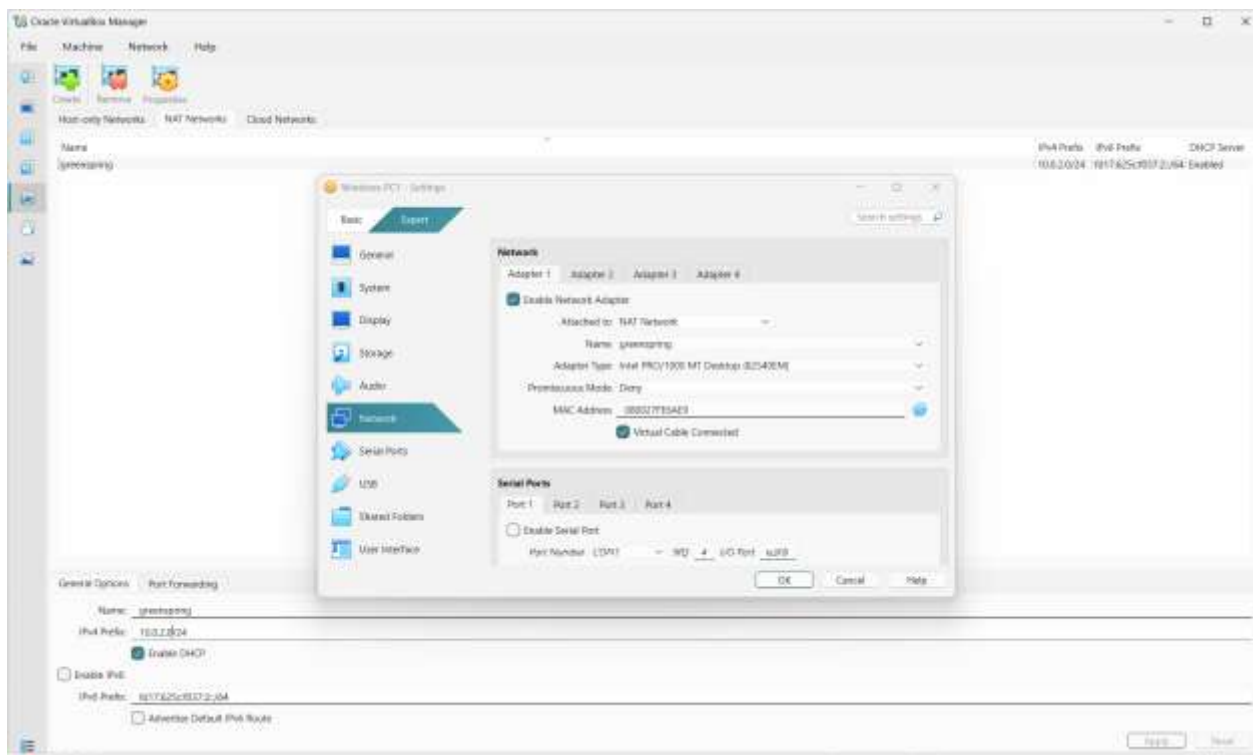

Set "**Disable Shutdown Ability: Disable**" to **"Enabled"**

Result: Shutdown Button not available on Desktop (start button) **IT OU**.

Screenshots

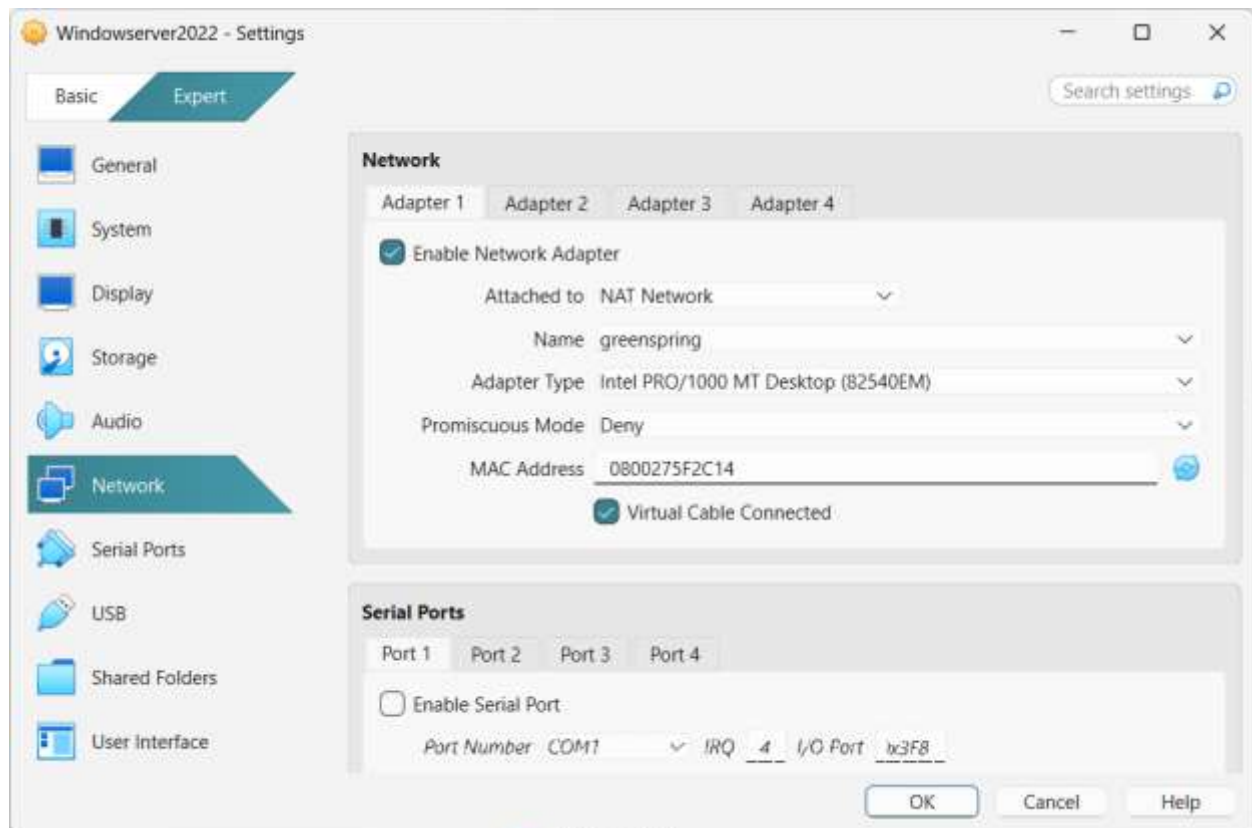

Virtual Box Network Configuration

File > Tools > Network > NAT Networks > input name & enable DHCP

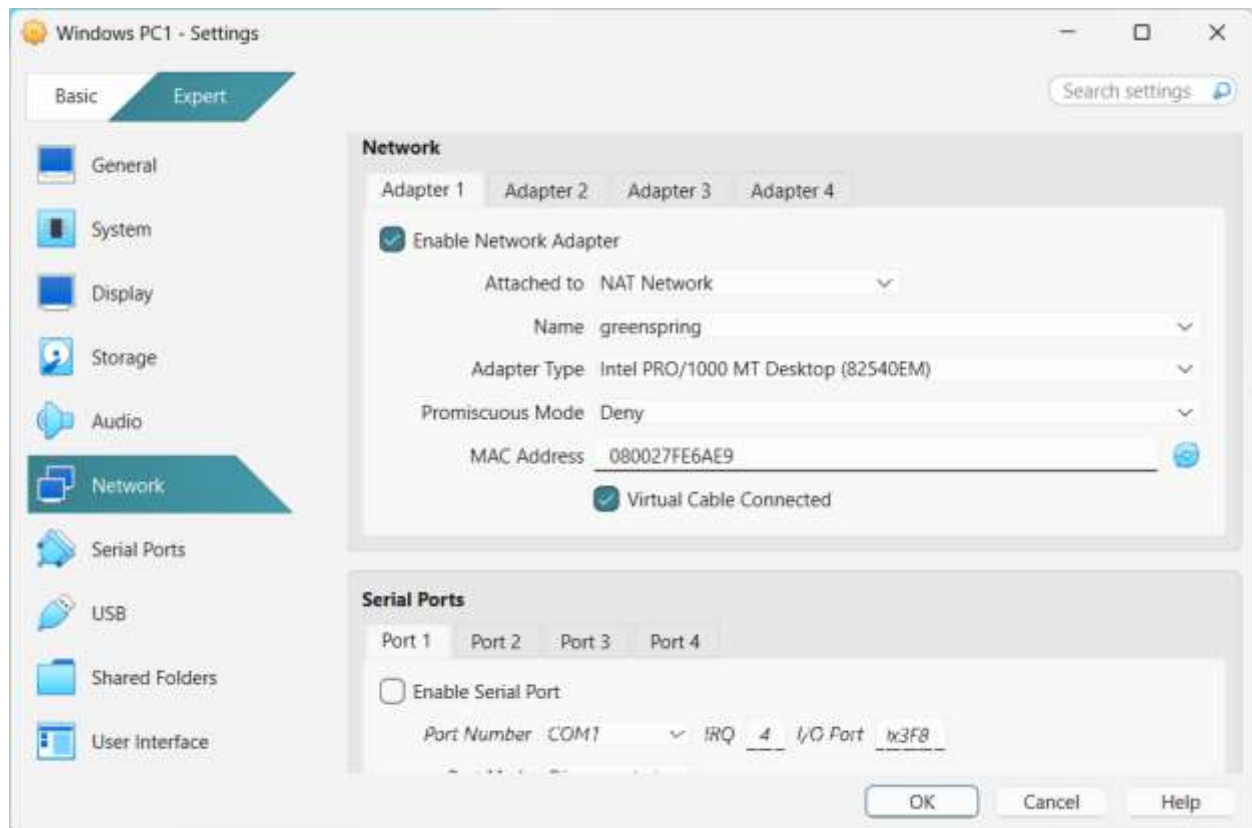

Windows Server 2022 Network Configuration

Settings > Network > Attached to (Nat Network) > Select okay

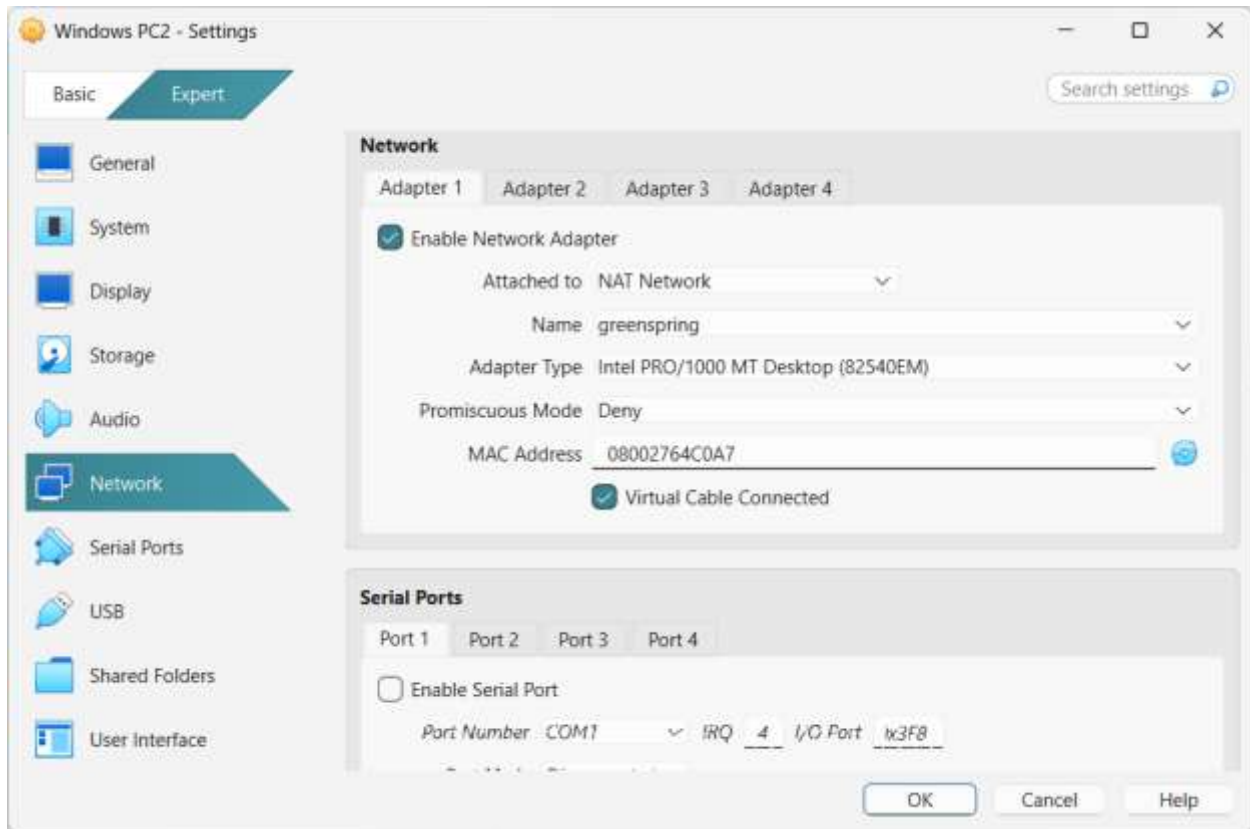

Window PC 1 Network Configuration

Settings > Network > Attached to (Nat Network) > Select okay

Window PC2 Network Configuration

Settings > Network > Attached to (Nat Network) > Select Okay

Deployment of Active Directory

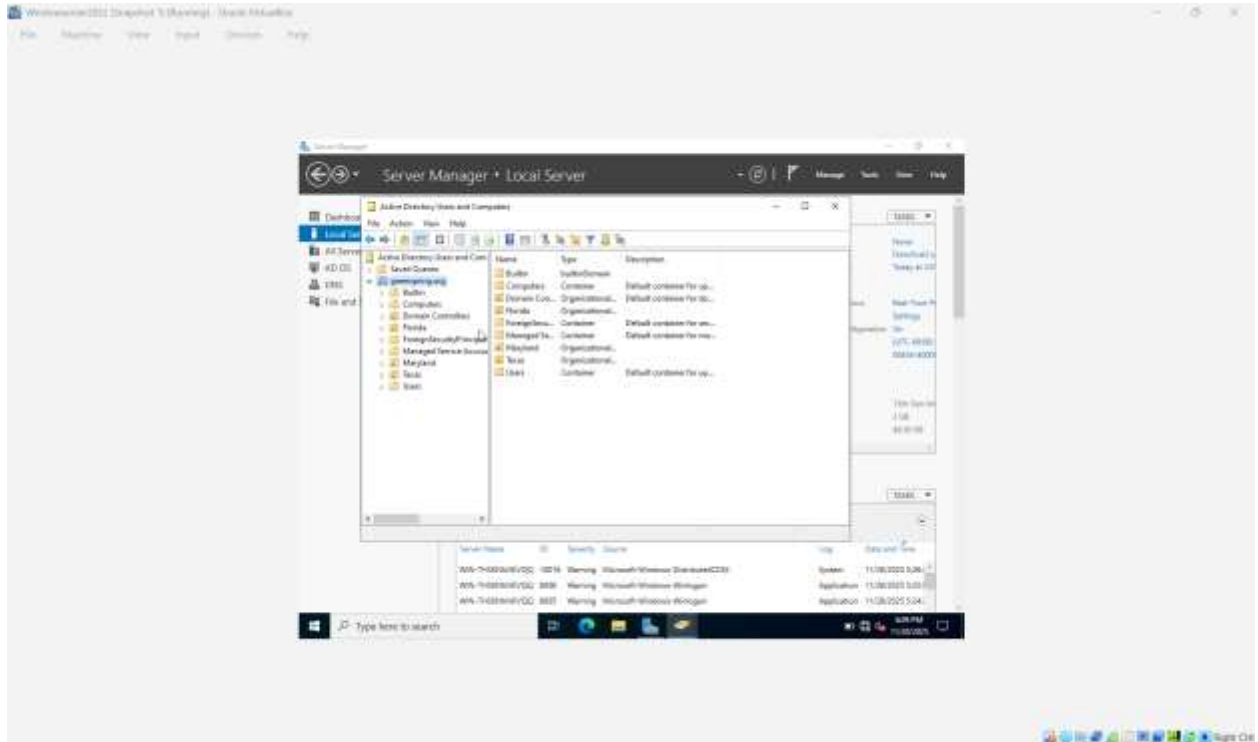

Server Manager > Manage > Add Roles & Features > Follow Prompts > Select Active Directory Domain Services > Click Add Features > Select Prompts > Install

Promote AD to Domain Controller

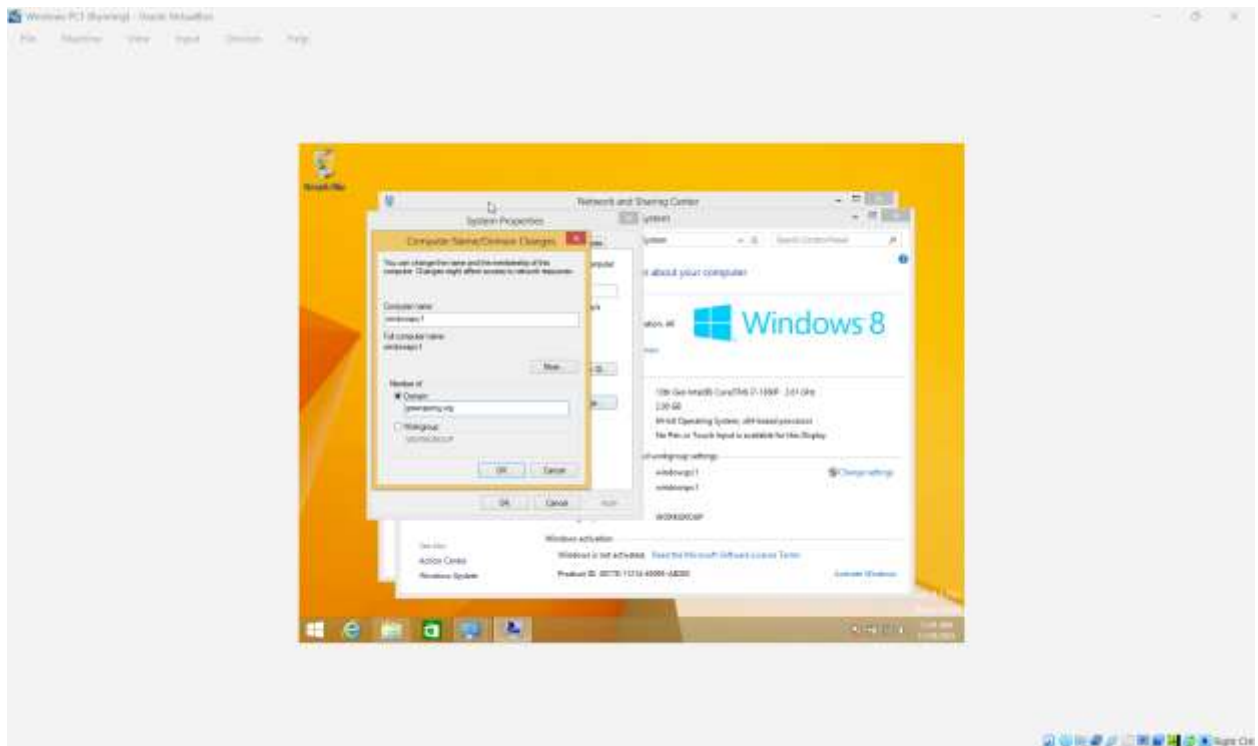

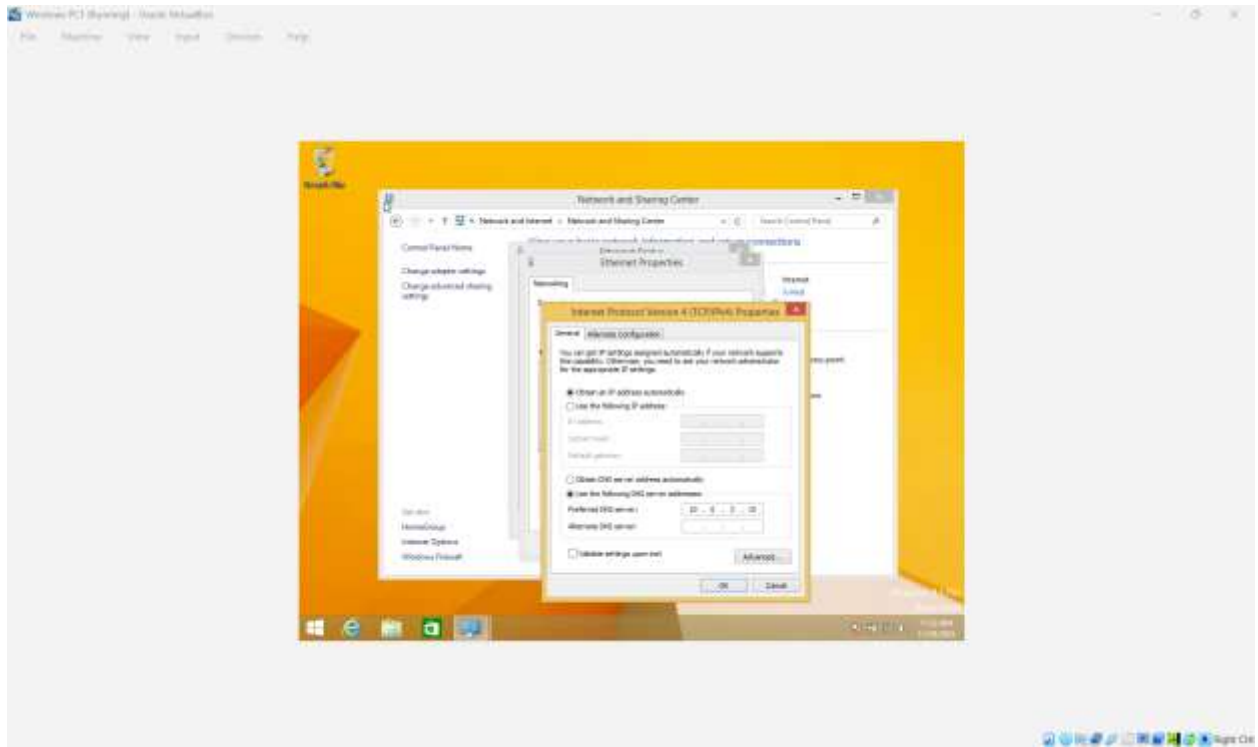

Click on the 'yellow caution symbol' > click on 'Promote this server to DC' > Add a New Forest > Follow prompts > Install

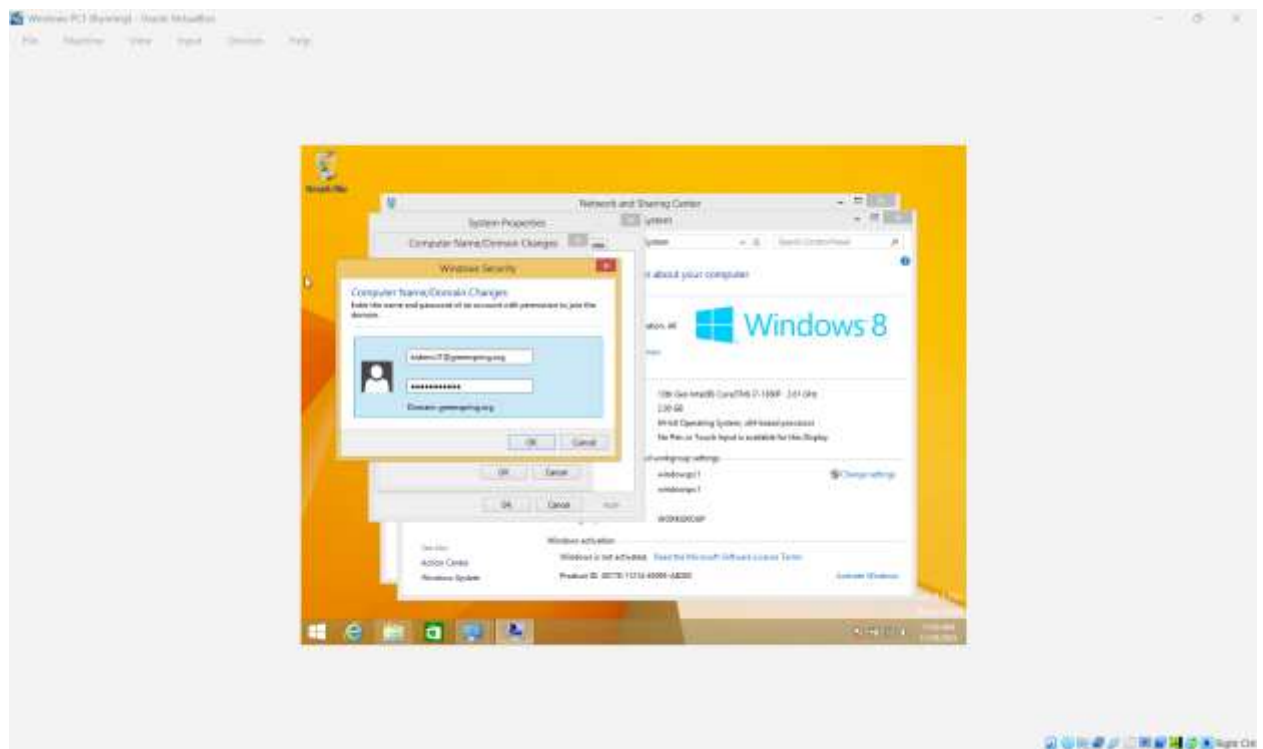

AD Domain Structure

Creation of Organizational Units- Texas, Maryland & Florida

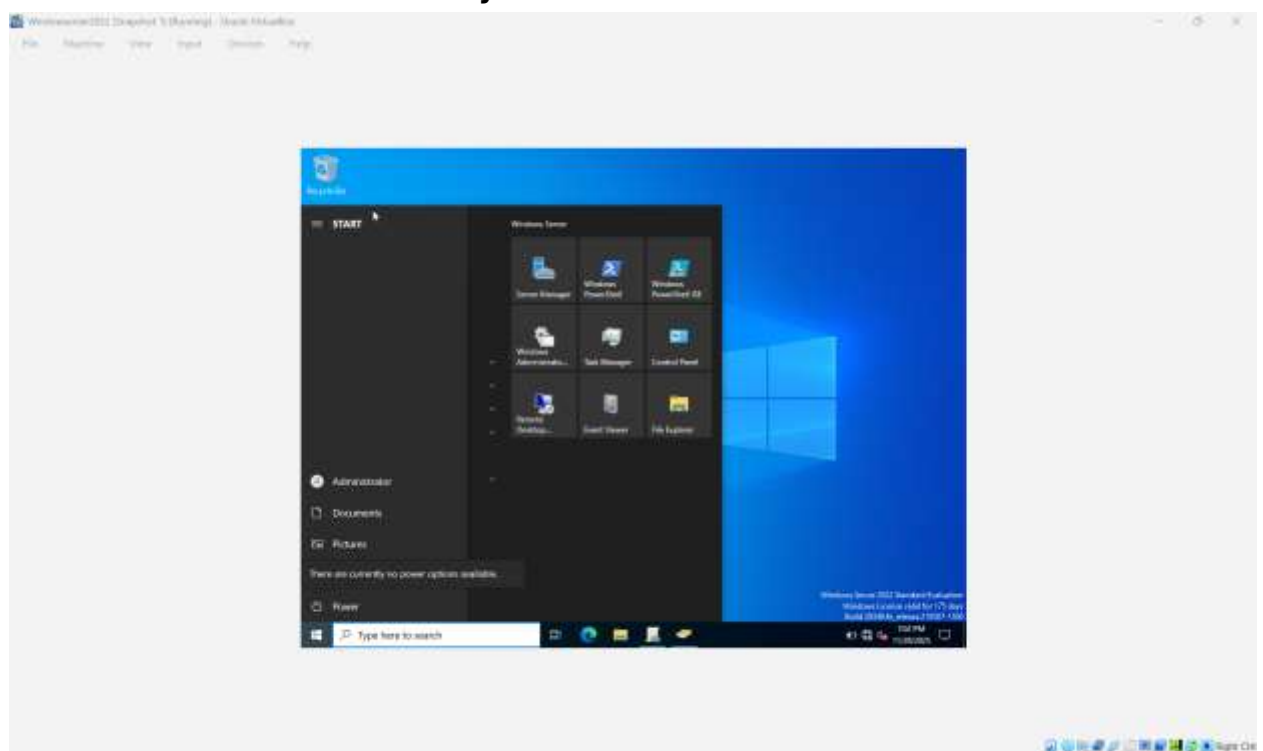

Creation of Group in Maryland OU

Result of denied shutdown Ability

Key Takeaways

- Gained practical experience with Windows Server roles and domain setup
- Implemented centralized access control using Group Policy
- Learned how to structure users and departments with OUs
- Applied IAM concepts in a real-world simulated environment
